As requested.

In 2014, EC Waste acquired the solid waste operations of Waste Management, Inc. in Puerto Rico. EC Waste now operates transfer stations, hauling operations and three landfills in Puerto Rico.

The three Puerto Rico landfills that EC Waste operates are Humacao, Mayaguez, and Penuelas Valley Landfills.

1. Humacao, with several lined cells, has long been the largest and best funded and operated municipal landfill in Puerto Rico.
2. Mayaguez is an "open dump" but has been relatively well run so it has not yet been a priority for enforcement action.
3. Penuelas Valley, also with several lined cells, is a commercial landfill and does not normally take in household waste (though it is a municipal solid waste landfill under federal statute).
4. The San Juan and Caguas landfills are closed. San Juan is an old landfill that closed in the early 90s. There is no waste operation at these landfills, only a gas collection and control system (GCCS) at the San Juan Landfill. The GCCS is operated by Landfill Technologies. EC waste may have hauling operations as well as transfer station in San Juan and Caguas.

We do not have any enforcement actions at these landfills.
